

Reference letter

During the period from January 2012 to January 2013 ERS Ltd. participated in the supply Project of the aviation jet fuel for NATO ISAF in Afghanistan. The company's main task in this project was the railway tank cars' provision, train-formation and freight forwarding to the recipient through Estonia, Russian Federation and other countries.

Company performed its task in cooperation with the tank cleaning company DONTAL LLC, which carried out the preparation of the railway tank cars for the jet fuel loading.

All railway tank car preparation operations, such as the internal cleaning from the last product residue, the tank internal washing, drying and degassing was performed by DONTAL LLC in mechanized mode with using the JetPetroClean® equipment of their own production.

The DONTAL LLC company experts adapted maximally their equipment to the railway tank car preparation requirements. In addition, they designed and manufactured the special tank cleaning unit JetPetroClean for preparing the railway tank cars for the jet fuel loading.

The work was carried out on a fixed schedule with excellent quality.

Due to the fact that they used mechanized technology, the total working time was reduced to minimum.

Also because of the use of mechanized technology, risks associated with operating in hazardous gas environment were reduced practically to zero.

E.R.S. Ltd. management expresses its gratitude to DONTAL LLC for the quality and professional work that has allowed our company to fulfil all obligations under the Project execution.

Sincerely

~~Sergei Balõbin~~
Member of the Board
